KITABU QUEST Standard IV Hisabati

Tanzania TIE-BASIC learner book

Mascot: elephant

This KITABU QUEST book turns the curriculum into short lessons, worked examples, guided activities, practice, review, and home links for Tanzania learners.

How To Use This Book

This book helps Standard IV learners study Hisabati one teachable topic at a time.

1. Start with the inquiry question and say what you already know.
2. Read the Learn section slowly and mark new words.
3. Try the worked example before reading the full solution.
4. Complete the activity and practice tasks.
5. Correct your answer using the success criteria.
6. Ask for support when your answer is still unclear.

Subject method: Tumia vielelezo, michoro, sentensi za kihisabati, na mifano iliyofanyiwa kazi kabla ya mazoezi binafsi.

Learning Skills In This Book

Each topic builds knowledge, skill, values, communication, collaboration, critical thinking, creativity, digital awareness, and self-confidence.

Study actively: speak answers aloud, draw when useful, show your working, cite evidence, use local examples, and correct mistakes after feedback.

A strong answer is specific. It names the idea, gives evidence or method, applies it to the task, and checks whether it answers the question.

Table Of Contents

Use this table to move through the book one topic at a time. Each topic has a lesson opener, clear teaching, a model or example, guided work, practice, and checks for understanding.

1. Whole Numbers And Place Value
2. Addition And Subtraction In Daily Life
3. Multiplication And Division Facts
4. Fractions As Equal Parts
5. Money And Simple Buying
6. Time And Timetables
7. Length Mass And Capacity
8. Shapes Data And Review

As you finish each topic, return to the success criteria and correct one answer before moving on.

Whole Numbers And Place Value: Lesson Opener

Learning focus: Whole Numbers And Place Value

Country link: a Tanzania school, market, farming, building, transport, or data problem for Whole Numbers And Place Value.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about whole numbers and place value

Inquiry questions:

- How can whole numbers and place value help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Whole Numbers And Place Value: Learn

Whole Numbers And Place Value teaches you to read, write, compare, and calculate with large whole numbers.

Core idea:

- A digit has value because of its position: ones, tens, hundreds, thousands, ten-thousands, and hundred-thousands.
- Compare numbers from left to right, starting with the greatest place value.
- For addition and subtraction, align place values before calculating.
- For multiplication or division, check whether the answer should be bigger or smaller than the starting number.

Tanzania example: class enrolment, harvest records, market stock, and school budget totals can all use whole-number operations.

Key words:

- Whole Numbers And Place Value
- Whole
- Numbers
- Place
- Value
- method
- model
- unit

Whole Numbers And Place Value: Worked Example

Worked example for Whole Numbers And Place Value: A school library has 23,475 storybooks and 18,320 revision books. How many books are there altogether?

1. Align place values.
2. Add ones, tens, hundreds, thousands, and ten-thousands.
3. $23,475 + 18,320 = 41,795$.
4. Estimate: $23,000 + 18,000 = 41,000$, so 41,795 is reasonable.

Answer: 41,795 books.

Whole Numbers And Place Value: Vocabulary And Study Skill

Use these words and study moves before you practise Whole Numbers And Place Value. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Whole Numbers And Place Value
- Whole
- Numbers
- Place
- Value
- method
- model
- unit

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Whole Numbers And Place Value without a clear example, method, or evidence.

Whole Numbers And Place Value: Guided Activity

Guided activity for Whole Numbers And Place Value:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Whole Numbers And Place Value: Practice And Correction

Practice for Whole Numbers And Place Value:

Main outcome: solve and explain problems about whole numbers and place value.

1. Solve one whole numbers and place value question using labelled steps.
2. Show your method with a drawing, table, number sentence, or diagram.
3. Check your answer and write one sentence explaining it.

Answer check:

Your answer should show a clear model, correct method, correct labels, and a final sentence.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to whole numbers and place value and solve it.

Whole Numbers And Place Value: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Whole Numbers And Place Value.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Whole Numbers And Place Value: Outcome Check

Outcome check for Whole Numbers And Place Value: Solve and explain problems about whole numbers and place value.

1. Add 34,785 and 21,406.
2. Estimate the answer to check it.
3. Explain one place-value step.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Addition And Subtraction In Daily Life: Lesson Opener

Learning focus: Addition And Subtraction In Daily Life

Country link: a Tanzania school, market, farming, building, transport, or data problem for Addition And Subtraction In Daily Life.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about addition and subtraction in daily life

Inquiry questions:

- How can addition and subtraction in daily life help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Addition And Subtraction In Daily Life: Learn

Addition And Subtraction In Daily Life teaches you to read, write, compare, and calculate with large whole numbers.

Core idea:

- A digit has value because of its position: ones, tens, hundreds, thousands, ten-thousands, and hundred-thousands.
- Compare numbers from left to right, starting with the greatest place value.
- For addition and subtraction, align place values before calculating.
- For multiplication or division, check whether the answer should be bigger or smaller than the starting number.

Tanzania example: class enrolment, harvest records, market stock, and school budget totals can all use whole-number operations.

Key words:

- Addition And Subtraction In Daily Life
- Addition
- Subtraction
- Daily
- Life
- method
- model
- unit

Addition And Subtraction In Daily Life: Worked Example

Worked example for Addition And Subtraction In Daily Life: A school library has 23,475 storybooks and 18,320 revision books. How many books are there altogether?

1. Align place values.
2. Add ones, tens, hundreds, thousands, and ten-thousands.
3. $23,475 + 18,320 = 41,795$.
4. Estimate: $23,000 + 18,000 = 41,000$, so 41,795 is reasonable.

Answer: 41,795 books.

Addition And Subtraction In Daily Life: Vocabulary And Study Skill

Use these words and study moves before you practise Addition And Subtraction In Daily Life. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Addition And Subtraction In Daily Life
- Addition
- Subtraction
- Daily
- Life
- method
- model
- unit

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Addition And Subtraction In Daily Life without a clear example, method, or evidence.

Addition And Subtraction In Daily Life: Guided Activity

Guided activity for Addition And Subtraction In Daily Life:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Addition And Subtraction In Daily Life: Practice And Correction

Practice for Addition And Subtraction In Daily Life:

Main outcome: solve and explain problems about addition and subtraction in daily life.

1. Solve one addition and subtraction in daily life question using labelled steps.
2. Show your method with a drawing, table, number sentence, or diagram.
3. Check your answer and write one sentence explaining it.

Answer check:

Your answer should show a clear model, correct method, correct labels, and a final sentence.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to addition and subtraction in daily life and solve it.

Addition And Subtraction In Daily Life: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Addition And Subtraction In Daily Life.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Addition And Subtraction In Daily Life: Outcome Check

Outcome check for Addition And Subtraction In Daily Life: Solve and explain problems about addition and subtraction in daily life.

1. Add 34,785 and 21,406.
2. Estimate the answer to check it.
3. Explain one place-value step.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Multiplication And Division Facts: Lesson Opener

Learning focus: Multiplication And Division Facts

Country link: a Tanzania school, market, farming, building, transport, or data problem for Multiplication And Division Facts.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about multiplication and division facts

Inquiry questions:

- How can multiplication and division facts help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Multiplication And Division Facts: Learn

Multiplication And Division Facts teaches you to read, write, compare, and calculate with large whole numbers.

Core idea:

- A digit has value because of its position: ones, tens, hundreds, thousands, ten-thousands, and hundred-thousands.
- Compare numbers from left to right, starting with the greatest place value.
- For addition and subtraction, align place values before calculating.
- For multiplication or division, check whether the answer should be bigger or smaller than the starting number.

Tanzania example: class enrolment, harvest records, market stock, and school budget totals can all use whole-number operations.

Key words:

- Multiplication And Division Facts
- Multiplication
- Division
- Facts
- method
- model
- unit
- answer

Multiplication And Division Facts: Worked Example

Worked example for Multiplication And Division Facts: A school library has 23,475 storybooks and 18,320 revision books. How many books are there altogether?

1. Align place values.
2. Add ones, tens, hundreds, thousands, and ten-thousands.
3. $23,475 + 18,320 = 41,795$.
4. Estimate: $23,000 + 18,000 = 41,000$, so 41,795 is reasonable.

Answer: 41,795 books.

Multiplication And Division Facts: Vocabulary And Study Skill

Use these words and study moves before you practise Multiplication And Division Facts. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Multiplication And Division Facts
- Multiplication
- Division
- Facts
- method
- model
- unit
- answer

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Multiplication And Division Facts without a clear example, method, or evidence.

Multiplication And Division Facts: Guided Activity

Guided activity for Multiplication And Division Facts:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Multiplication And Division Facts: Practice And Correction

Practice for Multiplication And Division Facts:

Main outcome: solve and explain problems about multiplication and division facts.

1. Solve one multiplication and division facts question using labelled steps.
2. Show your method with a drawing, table, number sentence, or diagram.
3. Check your answer and write one sentence explaining it.

Answer check:

Your answer should show a clear model, correct method, correct labels, and a final sentence.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to multiplication and division facts and solve it.

Multiplication And Division Facts: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Multiplication And Division Facts.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Multiplication And Division Facts: Outcome Check

Outcome check for Multiplication And Division Facts: Solve and explain problems about multiplication and division facts.

1. Add 34,785 and 21,406.
2. Estimate the answer to check it.
3. Explain one place-value step.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Fractions As Equal Parts: Lesson Opener

Learning focus: Fractions As Equal Parts

Country link: a Tanzania school, market, farming, building, transport, or data problem for Fractions As Equal Parts.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about fractions as equal parts

Inquiry questions:

- How can fractions as equal parts help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Fractions As Equal Parts: Learn

Fractions As Equal Parts teaches how parts of a whole are named and combined.

Core idea:

- The denominator tells how many equal parts make one whole.
- The numerator tells how many of those parts are being used.
- Fractions with the same denominator can be added or subtracted by working with the numerators.
- The denominator stays the same because the size of the parts has not changed.

Key words:

- Fractions As Equal Parts
- Fractions
- Equal
- Parts
- method
- model
- unit
- answer

Fractions As Equal Parts: Worked Example

Worked example for Fractions As Equal Parts: A learner eats $\frac{2}{8}$ of a pineapple in the morning and $\frac{3}{8}$ in the afternoon. What fraction is eaten?

1. The denominators are the same, so the parts are equal-sized eighths.
2. Add the numerators: $2 + 3 = 5$.
3. Keep the denominator: 8.

Answer: $\frac{5}{8}$ of the pineapple was eaten.

Fractions As Equal Parts: Vocabulary And Study Skill

Use these words and study moves before you practise Fractions As Equal Parts. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Fractions As Equal Parts
- Fractions
- Equal
- Parts
- method
- model
- unit
- answer

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Fractions As Equal Parts without a clear example, method, or evidence.

Fractions As Equal Parts: Guided Activity

Guided activity for Fractions As Equal Parts:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Fractions As Equal Parts: Practice And Correction

Practice for Fractions As Equal Parts:

Main outcome: solve and explain problems about fractions as equal parts.

1. Draw one whole divided into 8 equal parts. Shade $\frac{3}{8}$.
2. Calculate $\frac{2}{7} + \frac{4}{7}$ and explain why the denominator stays 7.
3. Write one story problem using fractions with the same denominator, then solve it.

Answer check:

Answers: $\frac{2}{7} + \frac{4}{7} = \frac{6}{7}$. The denominator stays 7 because the equal parts are sevenths.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to fractions as equal parts and solve it.

Fractions As Equal Parts: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Fractions As Equal Parts.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Fractions As Equal Parts: Outcome Check

Outcome check for Fractions As Equal Parts: Solve and explain problems about fractions as equal parts.

1. Draw $\frac{5}{8}$ on a fraction strip.
2. Calculate $\frac{3}{9} + \frac{4}{9}$.
3. Explain why the denominator does not change.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Money And Simple Buying: Lesson Opener

Learning focus: Money And Simple Buying

Country link: a Tanzania school, market, farming, building, transport, or data problem for Money And Simple Buying.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about money and simple buying

Inquiry questions:

- How can money and simple buying help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Money And Simple Buying: Learn

Money And Simple Buying teaches a mathematical idea by using a clear model, a labelled representation, step-by-step working, and a final check.

Key words:

- Money And Simple Buying
- Money
- Simple
- Buying
- method
- model
- unit

Money And Simple Buying: Worked Example

Worked example for Money And Simple Buying: Read the task, choose a representation, solve one step at a time, and check the answer in context.

Model:

1. Name what is known.
2. Choose a diagram, table, equation, or model.
3. Complete the calculation or reasoning.
4. Check the result with estimation or inverse reasoning.

Use a Tanzania classroom, market, garden, transport, or home example.

Money And Simple Buying: Vocabulary And Study Skill

Use these words and study moves before you practise Money And Simple Buying. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Money And Simple Buying
- Money
- Simple
- Buying
- method
- model
- unit
- answer

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Money And Simple Buying without a clear example, method, or evidence.

Money And Simple Buying: Guided Activity

Guided activity for Money And Simple Buying:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Money And Simple Buying: Practice And Correction

Practice for Money And Simple Buying:

Main outcome: solve and explain problems about money and simple buying.

1. Solve one money and simple buying question using labelled steps.
2. Show your method with a drawing, table, number sentence, or diagram.
3. Check your answer and write one sentence explaining it.

Answer check:

Your answer should show a clear model, correct method, correct labels, and a final sentence.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to money and simple buying and solve it.

Money And Simple Buying: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Money And Simple Buying.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Money And Simple Buying: Outcome Check

Outcome check for Money And Simple Buying: Solve and explain problems about money and simple buying.

1. Write one clear example from the topic.
2. Solve it with labelled steps.
3. Check the answer in context.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Time And Timetables: Lesson Opener

Learning focus: Time And Timetables

Country link: a Tanzania school, market, farming, building, transport, or data problem for Time And Timetables.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about time and timetables

Inquiry questions:

- How can time and timetables help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Time And Timetables: Learn

Time And Timetables teaches how to read, write, convert, and use time.

Core idea:

- Time can be shown on analogue clocks, digital clocks, calendars, and timetables.
- 60 seconds make 1 minute, and 60 minutes make 1 hour.
- Timetables help you find start time, end time, and duration.

Key words:

- Time And Timetables
- Time
- Timetables
- method
- model
- unit
- answer
- check

Time And Timetables: Worked Example

Worked example for Time And Timetables: A lesson starts at 8:10 and ends at 8:50. How long is the lesson?

1. Count from 8:10 to 8:50.
2. 10 minutes to 8:20, 20 more to 8:40, 10 more to 8:50.
3. Total time = 40 minutes.

Answer: 40 minutes.

Time And Timetables: Vocabulary And Study Skill

Use these words and study moves before you practise Time And Timetables. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Time And Timetables
- Time
- Timetables
- method
- model
- unit
- answer
- check

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Time And Timetables without a clear example, method, or evidence.

Time And Timetables: Guided Activity

Guided activity for Time And Timetables:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Time And Timetables: Practice And Correction

Practice for Time And Timetables:

Main outcome: solve and explain problems about time and timetables.

1. Read a clock showing 7:30 and write the time in words.
2. Convert 2 hours to minutes.
3. A trip starts at 9:15 and ends at 10:00. Find the duration.

Answer check:

Answers: 2 hours = 120 minutes. 9:15 to 10:00 is 45 minutes.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to time and timetables and solve it.

Time And Timetables: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Time And Timetables.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Time And Timetables: Outcome Check

Outcome check for Time And Timetables: Solve and explain problems about time and timetables.

1. Convert 3 hours to minutes.
2. Find the duration from 8:20 to 9:05.
3. Write the answer in minutes.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Length Mass And Capacity: Lesson Opener

Learning focus: Length Mass And Capacity

Country link: a Tanzania school, market, farming, building, transport, or data problem for Length Mass And Capacity.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about length mass and capacity

Inquiry questions:

- How can length mass and capacity help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Length Mass And Capacity: Learn

Length Mass And Capacity teaches how heavy objects are.

Core idea:

- Mass is measured with units such as grams and kilograms.
- A balance or scale helps compare mass fairly.
- Convert units before adding or comparing if the units are different.

Key words:

- Length Mass And Capacity
- Length
- Mass
- Capacity
- method
- model
- unit
- answer

Length Mass And Capacity: Worked Example

Worked example for Length Mass And Capacity: A bag of beans has a mass of 3 kg. A small packet has a mass of 500 g. What is the total mass in grams?

1. Convert 3 kg to grams: $3 \text{ kg} = 3000 \text{ g}$.
2. Add $3000 \text{ g} + 500 \text{ g} = 3500 \text{ g}$.

Answer: 3500 g.

Length Mass And Capacity: Vocabulary And Study Skill

Use these words and study moves before you practise Length Mass And Capacity. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Length Mass And Capacity
- Length
- Mass
- Capacity
- method
- model
- unit
- answer

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Length Mass And Capacity without a clear example, method, or evidence.

Length Mass And Capacity: Guided Activity

Guided activity for Length Mass And Capacity:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Length Mass And Capacity: Practice And Correction

Practice for Length Mass And Capacity:

Main outcome: solve and explain problems about length mass and capacity.

1. Name two objects measured in grams and two measured in kilograms.
2. Convert 2 kg to grams.
3. Compare 1500 g and 2 kg. Which is heavier?

Answer check:

Answer: 2 kg = 2000 g, so 2 kg is heavier than 1500 g.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to length mass and capacity and solve it.

Length Mass And Capacity: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Length Mass And Capacity.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Length Mass And Capacity: Outcome Check

Outcome check for Length Mass And Capacity: Solve and explain problems about length mass and capacity.

1. Convert 4 kg to grams.
2. Compare 2500 g and 3 kg.
3. Write the heavier mass with a reason.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Shapes Data And Review: Lesson Opener

Learning focus: Shapes Data And Review

Country link: a Tanzania school, market, farming, building, transport, or data problem for Shapes Data And Review.

Progression focus: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

By the end of this topic, you should be able to:

- solve and explain problems about shapes data and review

Inquiry questions:

- How can shapes data and review help you solve a real problem?

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Shapes Data And Review: Learn

Shapes Data And Review teaches properties of two-dimensional shapes.

Core idea:

- Shapes can be classified by sides, corners, lines of symmetry, and angles.
- A labelled sketch helps you compare shapes accurately.
- Use correct names such as triangle, rectangle, square, and circle.

Key words:

- Shapes Data And Review
- Shapes
- Data
- Review
- method
- model
- unit
- answer

Shapes Data And Review: Worked Example

Worked example for Shapes Data And Review: Classify a shape with 4 equal sides and 4 right angles.

1. Four sides means it is a quadrilateral.
2. Equal sides and right angles match a square.
3. Check the name and properties.

Answer: The shape is a square.

Shapes Data And Review: Vocabulary And Study Skill

Use these words and study moves before you practise Shapes Data And Review. Good vocabulary helps you read the question, choose the right method, and explain your answer clearly.

Key words:

- Shapes Data And Review
- Shapes
- Data
- Review
- method
- model
- unit
- answer

Study skill:

1. Choose three key words.
2. Say each word in your own words.
3. Give one example from Tanzania.
4. Use each word in a correct sentence, calculation step, diagram label, or oral answer.
5. Ask a partner to check whether your example matches the topic.

Common mistake to avoid: giving a general answer about Shapes Data And Review without a clear example, method, or evidence.

Shapes Data And Review: Guided Activity

Guided activity for Shapes Data And Review:

1. Work with a partner and read the worked example.
2. Make a similar question using Tanzania classroom, home, market, garden, transport, or timetable details.
3. Draw a model: table, number line, diagram, place-value chart, shape, or equation.
4. Solve the question step by step.
5. Swap work with another pair and check the method, units, labels, and final sentence.

Teacher check: the model should match the topic, not just any calculation.

Shapes Data And Review: Practice And Correction

Practice for Shapes Data And Review:

Main outcome: solve and explain problems about shapes data and review.

1. Draw a triangle, rectangle, and square.
2. Write two properties for each shape.
3. Circle the shape that has four equal sides and four right angles.

Answer check:

Answer: the square has four equal sides and four right angles.

Correction check:

- Did you show the method?
- Did you use the correct unit or label?
- Did you check whether the answer is reasonable?

Home link: Find one Tanzania home, school, shop, garden, road, game, or timetable example connected to shapes data and review and solve it.

Shapes Data And Review: Challenge And Remediation

Use this page after practice.

If you need support:

1. Re-read the success criteria.
2. Copy the worked example steps as headings.
3. Replace the model details with details from Shapes Data And Review.
4. Ask one clear question about the step that is confusing.

If you are ready for a challenge:

1. Create a new task from school, home, community, environment, technology, sport, art, market, or fieldwork.
2. Solve or answer it using correct vocabulary.
3. Explain why your answer is reasonable.
4. Write one extension question for a classmate.

Check:

- method is clear
- working is shown step by step
- answer is checked in context

Shapes Data And Review: Outcome Check

Outcome check for Shapes Data And Review: Solve and explain problems about shapes data and review.

1. Draw a square and a rectangle.
2. Write two properties they share.
3. Write one property that is different.

Success criteria:

- method is clear
- working is shown step by step
- answer is checked in context

Whole Numbers And Place Value: Review Clinic 1

Use this review clinic to strengthen Hisabati without copying earlier answers.

1. Choose one idea from Whole Numbers And Place Value that was difficult.
2. Explain the idea in your own words.
3. Make one new example from Tanzania.
4. Create one question that checks knowledge.
5. Create one question that checks skill or application.
6. Answer both questions and correct your work.

Challenge: Turn the idea into a drawing, table, map, dialogue, model, demonstration, or worked solution.

Addition And Subtraction In Daily Life: Review Clinic 2

Use this review clinic to strengthen Hisabati without copying earlier answers.

1. Choose one idea from Addition And Subtraction In Daily Life that was difficult.
2. Explain the idea in your own words.
3. Make one new example from Tanzania.
4. Create one question that checks knowledge.
5. Create one question that checks skill or application.
6. Answer both questions and correct your work.

Challenge: Turn the idea into a drawing, table, map, dialogue, model, demonstration, or worked solution.

Multiplication And Division Facts: Review Clinic 3

Use this review clinic to strengthen Hisabati without copying earlier answers.

1. Choose one idea from Multiplication And Division Facts that was difficult.
2. Explain the idea in your own words.
3. Make one new example from Tanzania.
4. Create one question that checks knowledge.
5. Create one question that checks skill or application.
6. Answer both questions and correct your work.

Challenge: Turn the idea into a drawing, table, map, dialogue, model, demonstration, or worked solution.

Fractions As Equal Parts: Review Clinic 4

Use this review clinic to strengthen Hisabati without copying earlier answers.

1. Choose one idea from Fractions As Equal Parts that was difficult.
2. Explain the idea in your own words.
3. Make one new example from Tanzania.
4. Create one question that checks knowledge.
5. Create one question that checks skill or application.
6. Answer both questions and correct your work.

Challenge: Turn the idea into a drawing, table, map, dialogue, model, demonstration, or worked solution.

Whole Numbers And Place Value: Application Workshop 1

Application workshop 1 for Whole Numbers And Place Value.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Addition And Subtraction In Daily Life: Application Workshop 2

Application workshop 2 for Addition And Subtraction In Daily Life.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Multiplication And Division Facts: Application Workshop 3

Application workshop 3 for Multiplication And Division Facts.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Fractions As Equal Parts: Application Workshop 4

Application workshop 4 for Fractions As Equal Parts.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Money And Simple Buying: Application Workshop 5

Application workshop 5 for Money And Simple Buying.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Time And Timetables: Application Workshop 6

Application workshop 6 for Time And Timetables.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Length Mass And Capacity: Application Workshop 7

Application workshop 7 for Length Mass And Capacity.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Shapes Data And Review: Application Workshop 8

Application workshop 8 for Shapes Data And Review.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Whole Numbers And Place Value: Application Workshop 9

Application workshop 9 for Whole Numbers And Place Value.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Addition And Subtraction In Daily Life: Application Workshop 10

Application workshop 10 for Addition And Subtraction In Daily Life.

Grade move: build concrete foundations using simple examples and teacher-guided correction; show methods, units, checks, and a final explanation.

Use this page to turn the skill into a complete problem, not a single short answer.

1. Create one problem from Tanzania school, home, shop, garden, transport, sport, or timetable life.
2. Write the known information and what must be found.
3. Choose a model: table, number line, diagram, equation, graph, shape, or place-value chart.
4. Solve step by step and keep units or labels clear.
5. Check the answer using estimation, inverse operation, substitution, or a second method.
6. Write one sentence explaining why the answer makes sense.

Extension: change one number in the problem and solve the new version.

Glossary

Use this glossary to revise important words in Hisabati.

- Whole Numbers And Place Value: Explain this term using an example from the book, your school, or your community.
- Addition And Subtraction In Daily Life: Explain this term using an example from the book, your school, or your community.
- Multiplication And Division Facts: Explain this term using an example from the book, your school, or your community.
- Fractions As Equal Parts: Explain this term using an example from the book, your school, or your community.
- Money And Simple Buying: Explain this term using an example from the book, your school, or your community.
- Time And Timetables: Explain this term using an example from the book, your school, or your community.
- Length Mass And Capacity: Explain this term using an example from the book, your school, or your community.
- Shapes Data And Review: Explain this term using an example from the book, your school, or your community.

Add five more words from your lessons and write your own meanings.

Answer And Teacher Notes

A strong Hisabati answer shows the model, method, units or labels, final answer, and a check. Use the worked examples and answer checks in each practice page to correct your work. When an answer is wrong, find the first step that changed the meaning and correct that step before trying a new question.

Final Project

Create a final project for Hisabati that shows what you can now do independently.

Your project must include:

1. A clear title.
2. A real-life problem, question, text, performance, investigation, design, or worked task.
3. Evidence from at least three lessons in this book.
4. A drawing, table, map, chart, model, dialogue, paragraph, performance plan, practical product, or worked solution.
5. A correction note showing one improvement after feedback.
6. A short reflection explaining what you learned, what was difficult, and what you will practise next.

Presentation check: keep the work neat, label important parts, use correct vocabulary, and be ready to explain your choices to a classmate or teacher.
